Better get ready to fight! The 3rd Arrancar, Vaah the Stampede, has finally arrived! Leave your comments and thoughts on our comment section below. The FM signal outputted from the band-pass filter 2, that is, the direct signal component and the intermediate signal component. The FM signal having the intermediate signal component is outputted as the low-frequency component of the signal of the first oscillation signal. The QCR 3 multiplies the low-frequency component of the signal of the first oscillation signal by the first oscillation signal, thereby generating the second oscillation signal having the low-frequency component of the intermediate signal component and the direct signal component. The second oscillation signal having the low-frequency component of the intermediate signal component and the direct signal component is supplied to the resonant circuit 6 via the second resonant capacitor 4. The resonant circuit 6 is constituted of the first and second coils L1 and L2 and the first and second resonant capacitors C1 and C2, and resonates with the second oscillation signal having the low-frequency component of the intermediate signal component and the direct signal component. The resonant circuit 6 has an inductance L6 on the low-frequency side. The first and second coils L1 and L2 and the first and second resonant capacitors C1 and C2 are connected to each other in series. The first and second coils L1 and L2 have inductances L1 and L2, respectively. The first and second resonant capacitors C1 and C2 have first and second capacitances C1 and C2, respectively. The first and second capacitances C1 and C2 are capacitances of the first and second resistors R1 and R2, respectively. The first oscillation circuit 1 generates the first oscillation signal having the direct signal component in the same phase with the FM signal by using the first oscillation signal having the intermediate signal component generated by the second oscillation circuit 3. The first oscillation signal having the intermediate signal component is inputted to the band-pass filter 2 in a same phase with the second oscillation signal having the intermediate signal component and is generated by the QCR 3. That is, 82157476af
